

BENCHMARK PROJECT MANAGEMENT (UK) LTD – CASE STUDY

Title

New Path Construction for Bristol City Council

General Scope:

Work included:

- Remove defective slabs and its sub-structure
- Lay new pre-cast concrete path edging to new profile
- Import new sub-base and compact to specification
- Lay binder and surface course to path

Dates:

Nov 2017

Client:

Bristol City Council

Value:

£7,000.00

Innovation:

- The loose and uneven concrete slabs were causing dangers to the general public, as a result insurance claims were being made. Rather than continually re-bedding the slabs it was best thought to replace the concrete slab footpath with a smooth macadam surface to help increase safety while also reducing maintenance costs.

Customer Satisfaction:

“Since the path has been built we have had no more attempted claims, wheelchair and pushchair users are also happy”
